PANEL OF EXPERT JUDGES SELECTS WINNERS FOR 1993

JULY/AUGUST 1993

California independent brings in <u>Best New Well</u>

Today, the town may still be unknown to many, but in oil and gas circles the new-found Bixler gas field is synonymous with overnight success.

"We're very pleased with it," Hector says of the discovery well that flowed at rates as high as 21 million cubic feet per day through a lessthan one-inch choke before the operator cut it back in the wake of a drop in gas prices.

To the end of May, the well had produced 1.8 billion cubic feet of high quality gas. At an average price of \$2 per thousand cubic feet, that amouts to approximateley \$3.4 million worth of gas.
